

# Diabetes

Adults with diagnosed diabetes and adults who have ever been told by a health care professional they have diabetes in the five Northwest County (Quin) Community Health Board (CHB)

## Adults age 20+, age-adjusted percent, diagnosed diabetes

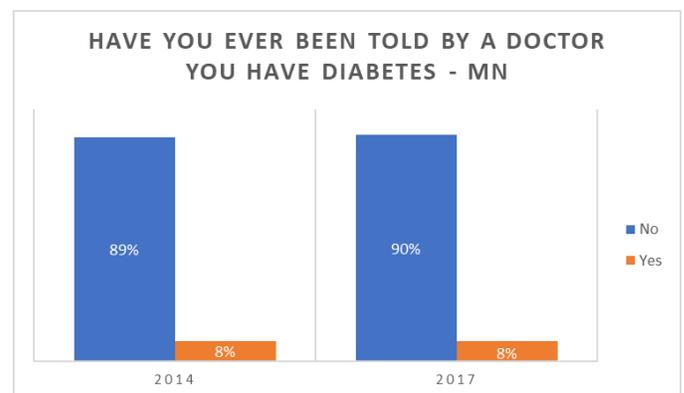

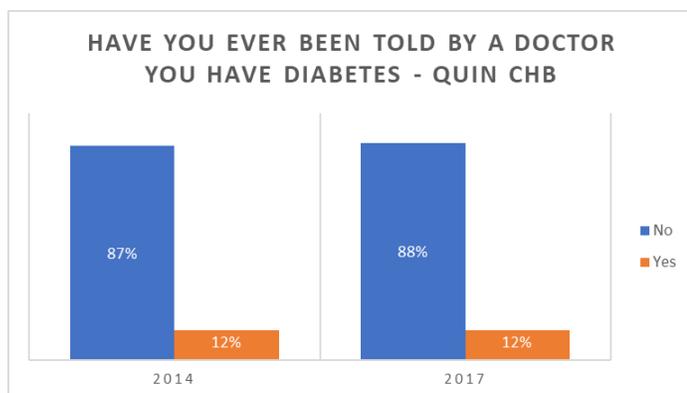

### SUMMARY

- Trends are fairly consistent overtime, although in 2015 there was greater variation in percentage of diabetes between counties in the Quin CHB.
- Marshall county has the highest percentage in 2017 but it decreases sharply

Source: US Diabetes Surveillance System, CDC

## Percentage of adults who have ever been told a health care professional they have diabetes

Source: Northwest Region Adult Health Behavior Survey

### SUMMARY

- Percentage of adults who have ever been told by a health care professional that you have diabetes is similar between the Quin CHB region and statewide.
